

sms-gateway.js

Important: Please note that we are still working on the documentation and will include all the features that SMS Gateway has offered us so far.

A Node.js library to interact with SMS Gateway using their v4.0 API.

Official Documentation

Please, see the official documentation to [get started](#).

Installation

```
npm i sms-gateway.js --save
```

Configuration

This plugin uses the SMSGateway v4.0 API, so you will need the "API Token" key that will be automatically generated in the SMSGateway service portal located in: My account -> Settings

```
const { messages, devices } = require('sms-gateway.js')('your-api-token-here')
```

Usage

1. Send a message:

A list of messages to send. You can use any combination of phone numbers, messages and devices:

```
messages.sendMessage([
  {
    "phone_number": "1234567890",
    "message": "SMS Gateway it works.",
    "device_id": 1 // your device id here
  },
  {
    "from": "AcmeLtd",
    "phone_number": "07791064782",
    "message": "Hello World",
    "device_id": 2
  }
]).then(response => {
  console.log('Message send successfully!')
  console.log(response.status)
```

```
        console.log(response.body)
    }).catch(error => {
        console.log('Error while send a message:')
        console.log(error.status)
        console.log(error.message)
        console.log(error.response.body)
    })
```

More details on [Sending a SMS messages](#).

2. Getting a message info:

You can check the status and other information of any of your SMS messages making a request with the `messageId`:

```
let messageId = 123456

messages.getMessage(messageId).then(response => {
    console.log(response.status)
    console.log(response.body)
})
.catch(error => {
    console.log(error.status)
    console.log(error.message)
    console.log(error.response.body)
})
```

More details on [Getting a SMS message information](#).

3. Canceling SMS messages:

Sometimes you may want to cancel messages you've requested to be sent. You can cancel outgoing messages using a list with the IDs of messages that you wish to cancel:

```
messages.cancelMessages([
    {
        "id": 10945815
    },
    {
        "id": 59484209
    },
    {
        "id": 59484210
    },
    {
        "id": 59484211
    }
])
```

```
.then(response => {  
  console.log(response.status)  
  console.log(response.body)  
})  
.catch(error => {  
  console.log(error.status)  
  console.log(error.message)  
  console.log(error.response.body)  
})
```
